Final Project

Overview

High Level Design

Narrative (How is this gonna work?)

- Purchase Mode
  - In purchase mode, the user will enter item locations, enter money amounts, ask for refunds, ect.
- Setup/Maintenance Mode
  - In setup mode, the technician can update the prices for each item.

- Reset:
  - A reset mode will exist no matter what which will set everything to zero and set the prices of the items to default values. This will be activated using Key0 on the terasic board.

Purchase Mode

- Power up the device (Key0)
- Insert the item number (Keypad)
- Device will display price on Hex 5-3
- User enters price (switches)
- Price will display on Hex 2-0
  - If the price = 0.95 and the user enters 1 dollar and then tries to enter 0.25 cents, the computer will flash the quarter return LED (LED2) and will not allow the display to update for anything beyond 1 dollar.
- The user can hit cancel or refund (Key1) at anytime, but this will not work after the vend button has been pushed
- Once vend is hit (Key3), the computer will calculate the difference between the price and the user entered amount and give any change if necessary by blinking the respective LED's

Setup/Maintenance Mode

- Press setup mode button (Key2) to enter setup Mode
- enter the number of the item (Keypad)
- Item number will appear on hex(5-3)
- Next enter the price with sliders as in normal operating mode
- Hit enter (Key0)
- Hit (Key2) to exit operation mode or enter another item number
